

The diagrams illustrate the construction of the number 10 in Braille. The first two digits are formed separately: '1' (dots 1, 2, 5) and '0' (dots 1, 2, 3, 4, 5, 6). Then, the process of combining them into a single ten-digit is shown by adding a ten's stroke to the first digit and a unit's stroke to the second digit.
